Best Way to Prompt GPT-5

The simple 6-part prompt that ships real work

Stop prompting like it is 2023.
Start shipping in 2025.

- Clear parts beat long walls of text.
- One prompt. One job. One result.
- You can teach this to your team in one hour.

Why old prompts fail

GPT-4 style prompting is outdated

- ❌ Roleplay fluff wastes tokens and attention.
- ❌ Keyword stuffing does not guide the model.
- ❌ No success target means random output.
- ❌ No stop rules means it keeps talking.
- ❌ GPT-5 rewards structure, safety, and clear outcomes.

Old Way

New Way

Part 1: Role

What it is: The hat the model wears.

Use it to: Set expertise and audience.

Checklist:

- ☒ Name the role in 1 line.
- ☒ Name the audience in 1 line.
- ☒ Keep it real, not cute.

Mini template:

Role: Act as a [expert type] for [audience].

Avoid: Long backstory, fake personality, jokes.

Part 2: Task

What it is: The job to do now.

Use it to: Define the single outcome.

Checklist:

- ☒ Start with a verb.
- ☒ Keep scope tight.
- ☒ Add 2 to 4 rules.
- ☒ Name the timebox if any.

Mini template:

Role: [verb] [what] with [rules] and deliver [one outcome].

Avoid: Multiple jobs in one ask.

Part 3: Context

What it is: Only the facts that matter.

Use it to: Cut confusion and rework.

Checklist:

- ☒ Add data that changes the answer.
- ☒ Add format or brand voice if needed.
- ☒ Drop trivia and filler.

Mini template:

Context: [facts, limits, sources, tone].

Avoid: Big copy paste dumps.

Part 4: Reasoning

What it is: How to think before writing.

Use it to: Get better choices and fewer errors.

Checklist:

- ✓ Ask for steps or checks.
- ✓ Ask to compare options.
- ✓ Ask to flag risks or gaps.

Mini template:

Reasoning: Think step by step. Compare options.
Note risks. Then answer.

Avoid: “Be smart.” It means nothing.

Part 5: Output

What it is: The final shape of the answer.

Use it to: Make copy paste easy.

Checklist:

- ✓ Name the format.
- ✓ Show a tiny example.
- ✓ Cap length by lines, words, or tokens.
- ✓ Add style if needed.

Mini template:

Output: Return [format]. Use [fields or headings].
Max [limit].

Avoid: “Write it up.” That is vague.

Part 6: Stop conditions

What it is: The finish line.

Use it to: End clean and avoid rambling.

Checklist:

- ☒ State exact stop rule.
- ☒ State count limits.
- ☒ State what to skip.

Mini template:

Stop: End after [N items]. Do not add notes or tips.

Avoid: Letting it add extras after the answer.

The Anatomy of a GPT-5 Prompt

Act as an expert travel guide focused on recommending lesser-known, unique outdoor hikes within two hours of San Francisco.

- Begin with a concise checklist (3-7 bullets) of steps you will follow to complete this task, focusing on conceptual planning rather than details.
- Identify and present the top 3 medium-length hikes (not among the most popular) within a two-hour drive from San Francisco.
- Ensure each hike selected offers a unique adventure due to its scenery, remoteness, or distinctive qualities.

- Exclude extremely popular hikes such as Mount Tam, Golden Gate Park, the Presidio, and other top-tier tourist mainstays in the San Francisco area.

- Prioritize accuracy: Hike names must match official listings (e.g., AllTrails), and all time and distance estimates should be realistic and reliable.

- Highlight what makes each hike an outstanding adventure in a concise summary

- Internally vet all suggested hikes to guarantee they are real, under-the-radar, and fit the specified parameters before responding.
- Cross-check hike names and details with reliable outdoor hiking sources.
- Optimize for clarity, concise presentation, and practical value.

- Return the results as a properly formatted Markdown table with these columns:

[Hike 1 name]	[Address]	[X.X]	[XX]	[X:XX]	[Summary]
[Hike 2 name]	[Address]	[X.X]	[XX]	[X:XX]	[Summary]
[Hike 3 name]	[Address]	[X.X]	[XX]	[X:XX]	[Summary]

- Task is complete when three verified, unique medium-length hikes, excluding overly popular options, re returned in the specified format. and validation has confirmed full compliance with all requirements.

Stop Conditions

3 real, copy-ready examples

Cases →	Law firm intake router	Dental office missed call text	HVAC dispatcher triage
Role	Legal ops assistant for a small firm.	Front desk assistant.	Service desk agent.
Task	Triage a new email into lead, client, or spam.	Write a friendly SMS to a missed call.	Classify a ticket into emergency or standard.
Context	Use tags for practice area. Check conflict note. Source is Gmail.	Tone warm and short. Offer booking link https://example.com/book .	If no heat, fridge out, or water leak, mark emergency. Use timestamps.
Reasoning	Read, extract party names, choose one label, note missing info.	Use caller name if present. Offer two time windows.	Apply rules and cite the trigger.
Output Format	JSON {type, practice_area, urgency, missing_fields}.	One 160 character SMS.	Label plus 1 line reason.
Stop	Return one JSON block only.	One message only.	Label and one line only.
Example Input	"Hi, I was hit on Broad St by ACME Trucking. Need help. — Sarah Lee, 614-555-0112."	Name: "Maria Chen." Missed at 9:42 AM. Reason unknown.	"Unit 12. Walk-in cooler at 58°F. Opened ticket 6:15 am. Food at risk."
Example Output	{ "type": "lead", "practice_area": "personal_injury", "urgency": "high", "missing_fields": ["incident_date"] }	"Hi Maria, sorry we missed you. Want to book a quick visit? We have today 3–5 pm or tomorrow 9–11 am. Grab a time here: https://example.com/book "	"Emergency — refrigeration failure; food spoilage risk."

Copy the pattern. Win the day.

- One prompt. One job. One result.
- Teach your team the 6 parts.
- Ship, test, measure, improve.
